# XDS-1068 User's Manual

Contents

1. Introduction

This document describes the hardware and software operations of the XDS-1068 system set up, and frequently asked questions.

1.1. Features

- 10-inch multi-touch widescreen LCD display and stereo speakers
- Web camera
- 4GB on-board flash local storage with SD card slot
- Built-in wireless b/g/n network and Ethernet
- Power over Ethernet
- Supports full POPAI Screen Media Formats Standards profiles S1 to S12, and E1 to E8
- Multiple 3rd party software solution compatibility
- Industry leading W3C SMIL support for developers

1.2. Package contents
|			
Main Unit	AC Adapter	Ethernet cable	Standard 3.5mm to RCA AV adapter
Display stand and screws	Quick Start Guide	Documentation CD (select SKUs)	Software set up guide (select SKUs)
1.3. Physical view and features

1

Audio out jack — Reset
Ethernet — USB x2
SD card slot
1.4. Installation

Fix the display stand

1 Put the supplied display stand onto the screw socket.
2 Insert the two supplied screws.
3 Fasten the screws.

Fix the Kensington lock

1 Press Kensington lock's button and aim at the lock hole.
2 Plug the lock into the lock hole, and then lose the button.

Open the back cover

1 Lose the screw of the back cover.
2 Push the back cover toward the arrow's direction, and then pull up.

2

2. Configuring the XDS-1068 digital signboard

2.1. System connections

1 Attach the AC power adapter to power on the unit. After approximately **35 seconds** booting animation will be displayed on screen as shown below :

2 Player boot process takes approximately **60 seconds** to complete.

After boot up complete, signboard will stay in basic settings menu if no content service has been configured (i.e. first boot up for brand new unit or after a factory reset). <u>Touch the panel (or plug in a USB mouse) to start configuring the signboard</u>.

If you have already set content into the signboard, contents will play back automatically after 15 seconds after boot up.
<u>To enter the menu system at any time during playback, touch the panel (or plug in a USB mouse and hold the left mouse key) on the corner area as shown below for 10 seconds.</u>

 *Player will ask for password if password is pre-configured.

2.2. Basic settings

Touch the panel or plug in a USB mouse to the signboard to configure settings.

(Fig. 2.2.1)

3

Basic settings allow user to configure the 3 important settings to signage application

– Network, Time zone and Content.

Each time user enter Basic settings menu, signboard will start playback automatically after 15 seconds if user already set content services previously. Auto playback can be canceled by click on the button while it's counting down.

User is able to enter Advanced Setting menu by clicking the Advanced button.

2.3. Connect the XDS-1068 to your network

Wireless connection

1 Click the **Wireless LAN** setting, the wireless configuration UI will be launched.
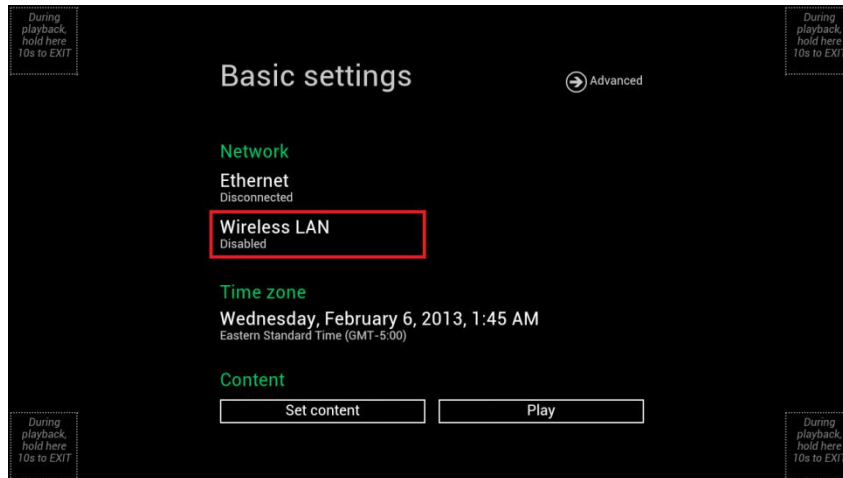

(Fig. 2.3.1)

2 Click the **ON/OFF** button as indicated below to turn ON Wireless interface (Ethernet will be disconnected when signboard connects to wireless network).

(Fig. 2.3.2)

3 The signboard will scan for wireless signals nearby and available AP stations will be listed.

4
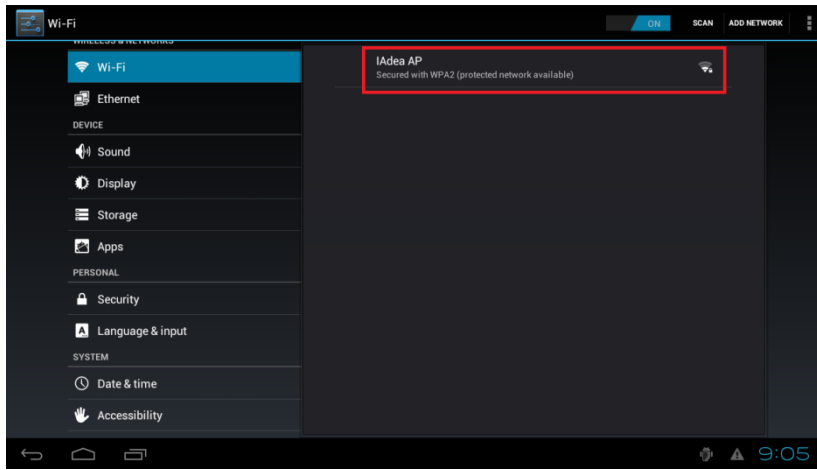

(Fig. 2.3.3)

4   Click on the station name to connect. If the network requires authentication, you will be asked to provide the password for access.
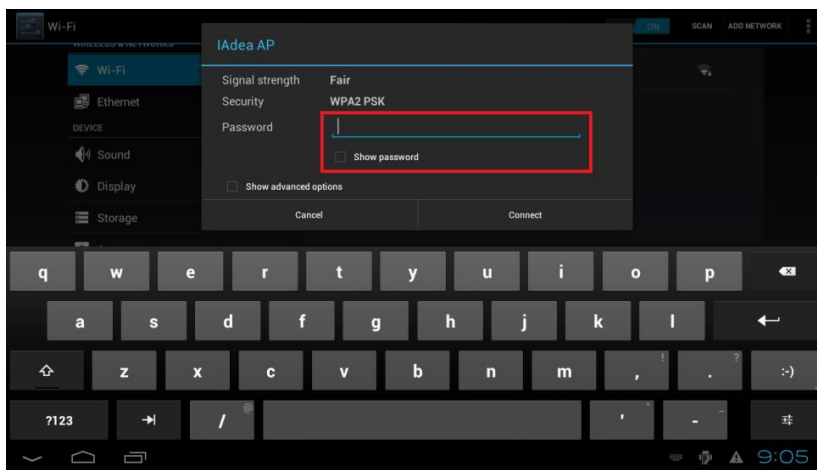

(Fig. 2.3.4)

Wired connection

To use the wired Ethernet connection, connect an Ethernet cable and disable the Wireless LAN interface first
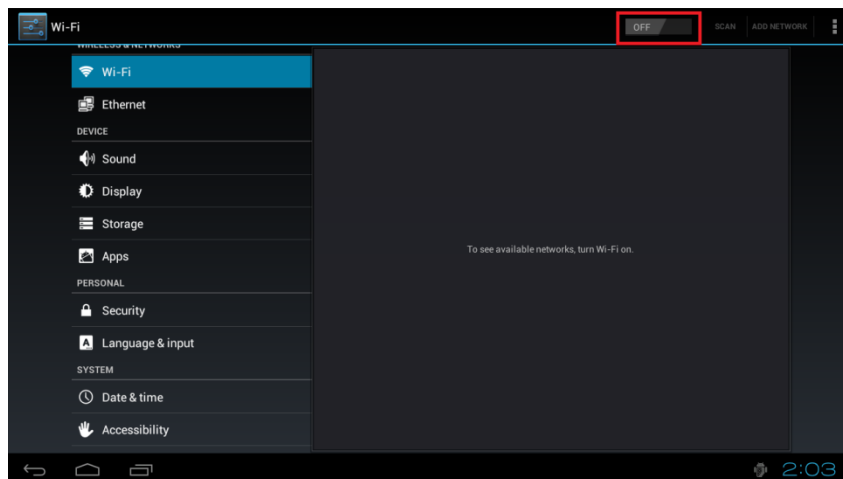

1   Click the **Wireless LAN** setting, the wireless configuration UI will be launched. (Fig. 2.3.1)

2   Click the **ON/OFF** button as indicated below to turn OFF Wireless interface. (Fig. 2.3.2)

DHCP – automatically assign network IP address

3   Turn on Ethernet interface. For DHCP environment, configuration is finished in this step.
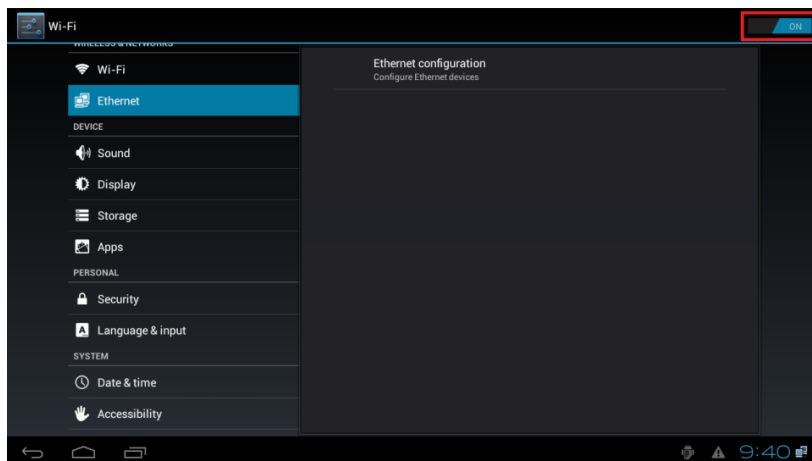

(Fig. 2.3.5)

5

Static IP – manually assign network IP address

4   Click the **Ethernet** to make static IP configuration.
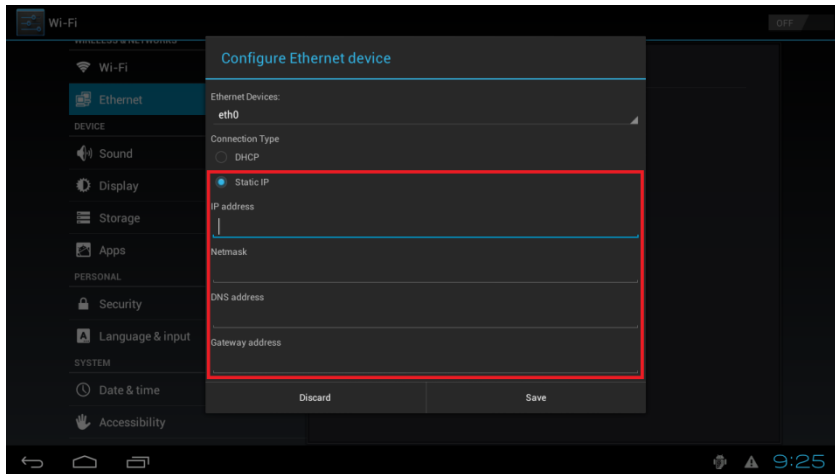

(Fig. 2.3.6)

2.4. Time zone settings

1   Click the **Time zone** , configuration menu will be launched.
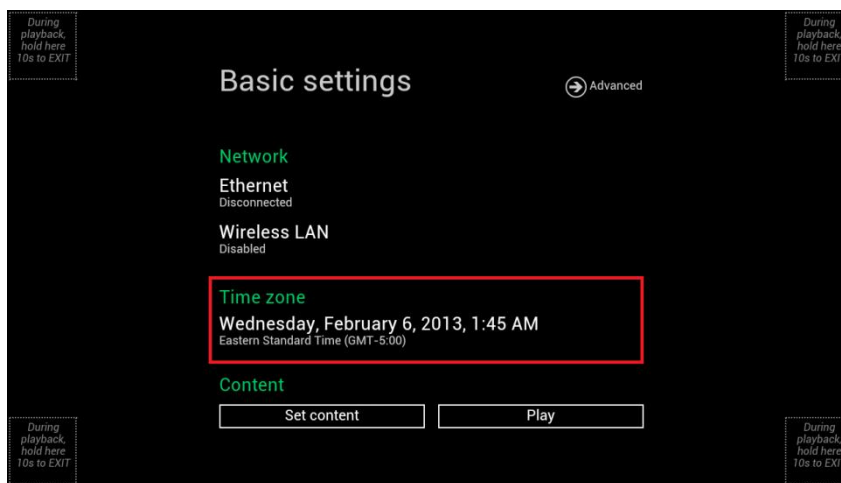

(Fig. 2.4.1)

2   Choose the correct time zone from available options.

(Fig. 2.4.2)

6
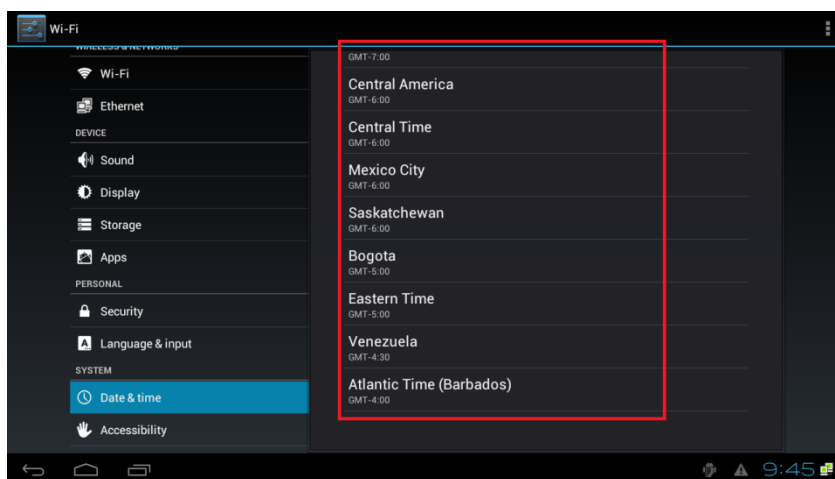

2.5. Content settings

1   Click the **Set content** button, configuration menu will be launched.
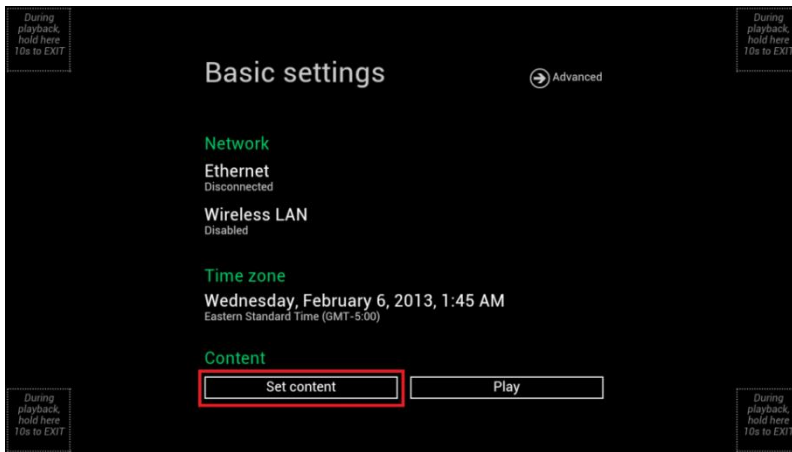

(Fig. 2.5.1)

2   **Input** the content source URL and click Connect button, signboard will start playback immediately.

(Fig. 2.5.2)

2.6. Player Information

User can check the signboard's basic information including the Health status; Firmware version; and Player ID.

1   Click the **Advanced** button, advanced configuration menu will be launched.

(Fig. 2.6.1)

7
2   Click on **Information**. The definitions of the Health Status:
Green – Normal. The device connects to the URL server of the content source normally.
Blue – Local. The device plays the contents from the USB drive or SD card.
Gray – Disconnected. The device is in the disconnection state.
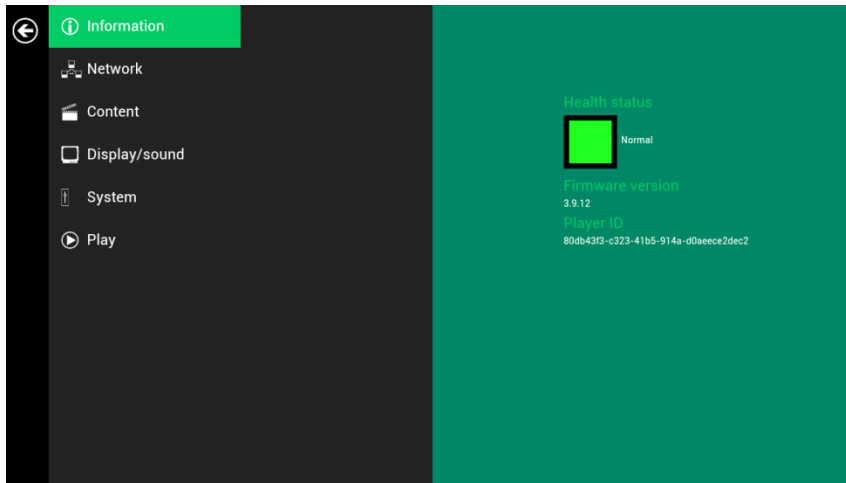

(Fig. 2.6.2)

2.7. Content configuration – AppStart

User can assign the URL and APP for execution after the system start up.

1   Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

2   Click on **Content**, and then click on AppStart.

3   Enter the valid URL of HTML/SMIL in AppStart(Fig. 2.7.1).

4   User can disable the Auto run from here. Auto run will automatically being enabled when content is played.
This is useful when system integrator prepare the device in the office before installation.
In most case, the network need to be re-configured on site, so this prevent the device start playback
automatically when first time power up on site.

5   The Advanced option is used for the 3rd-party App configuration only.
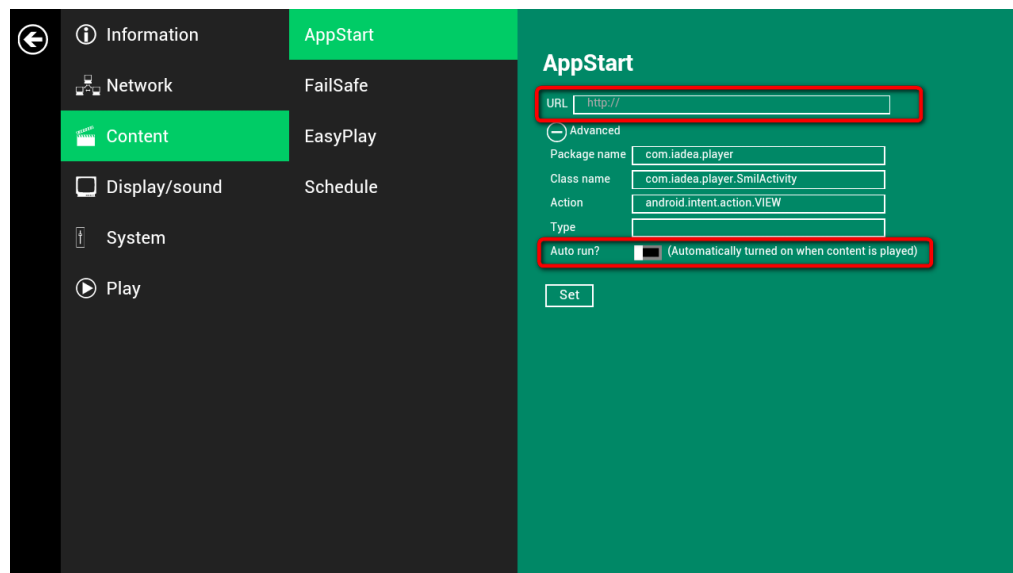

(Fig. 2.7.1)

2.8. Content configuration – FailSafe

User can assign the URL and APP for execution while the system is failed to play the assigned content.

1   Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

2   Click on **Content**, and then click on FailSafe.

3   Enter the URL of HTML/SMIL/Media RSS in FailSafe.

4   The Advanced option is used for the 3rd-party App configuration only.
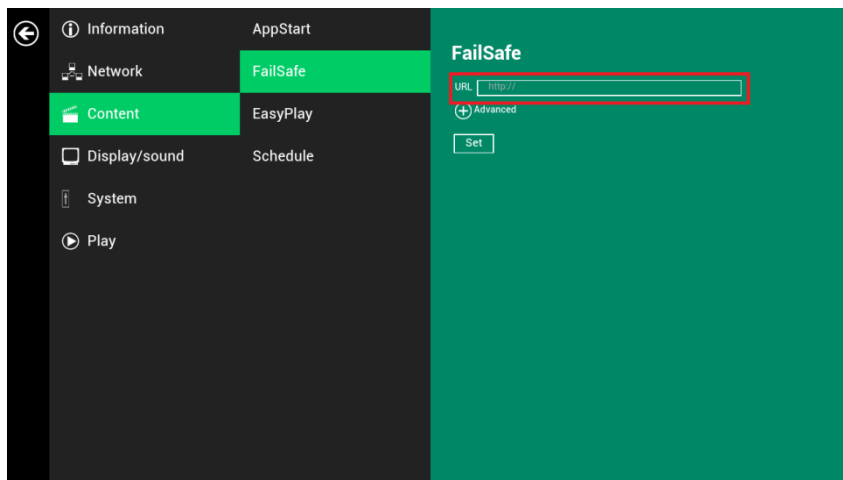

(Fig. 2.8.1)

2.9. Content configuration – EasyPlay

The feature EasyPlay allows the signboard to play the media contents from the USB flash drive (or SD card) directly.

When EasyPlay is enabled, the signboard will play the contents from the USB drive (or SD card) only. If user wants to play the contents from the URL server configured via 'Set content', EasyPlay must be disabled.

1   Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

2   Click on **Content**, and then click on **EasyPlay**.

3   Click **Disabled/Enabled** button to enable EasyPlay , and choose from 2 available operation modes, Photo Mode and Movie Mode.

(Fig. 2.9.1)

9
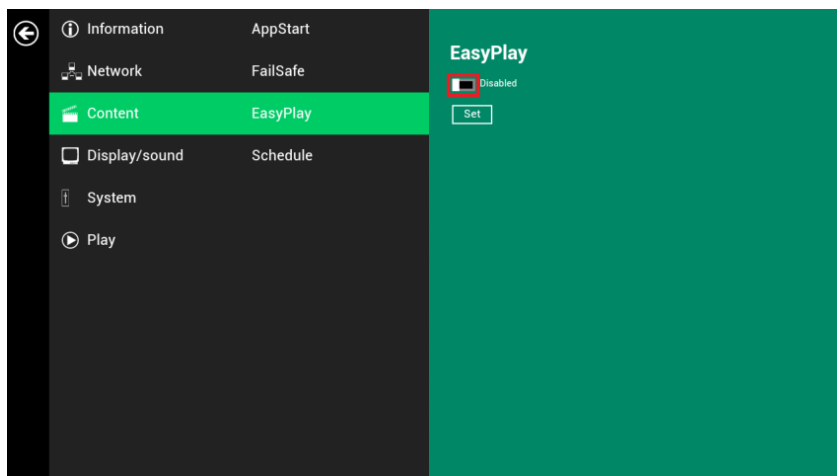

Configure Photo Mode

4   Click on Photo for choosing photos and music. Click on the button as marked in red below, and select the photos/music directory from the USB drive.

5   Click **Set** button after the folders are selected.

(Fig. 2.9.2)

Configure Movie Mode

6   Click on **Movie** for choosing movies. Click on the button as marked in red below, and select the movie directory from the USB drive.

7   Click **Set** button after the folder is selected.

8   The files in the selected folders will be played while clicking on the Play button in the Basic settings or Advanced configuration menu.
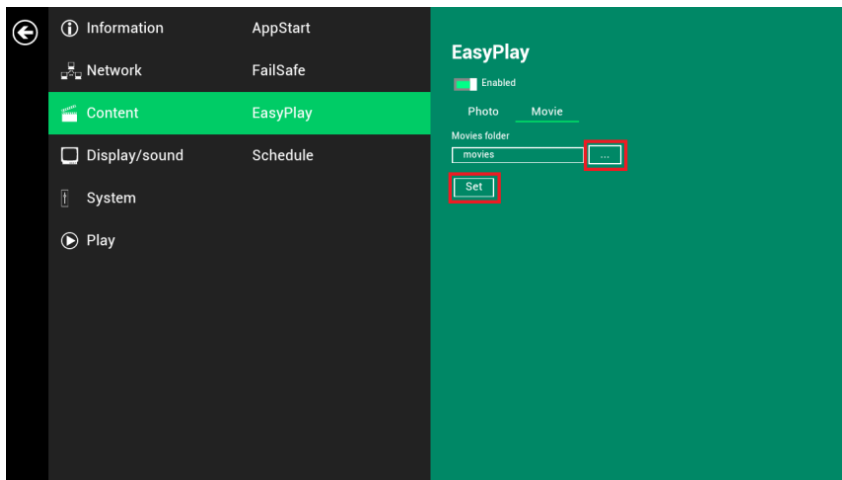

(Fig. 2.9.3)

EasyPlay Schedule configuration

1   Click the Advanced button, advanced configuration menu will be launched. (Fig. 2.6.1)

2   Click on **Content**, and then click on **Schedule**.

**3**   Click on the buttons marked in red below to enable/disable the EasyPlay schedule for each time slots. Type the scheduled time in the dialogue boxes marked in blue below by using the pop-up keyboard or the USB keyboard.

10
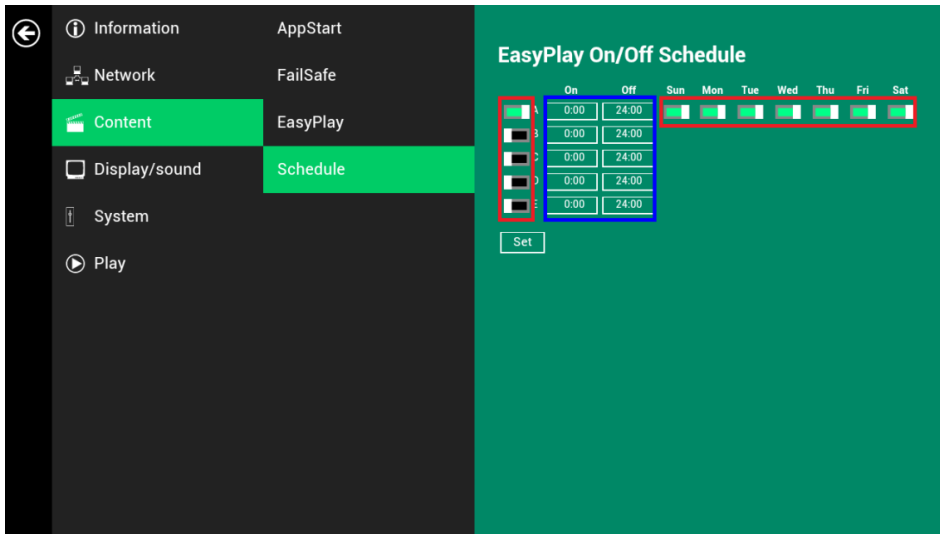

(Fig. 2.9.4)

4   The "On" times assigned in the time slots A-E are **inclusive**. For example a schedule assigned as the figure below,
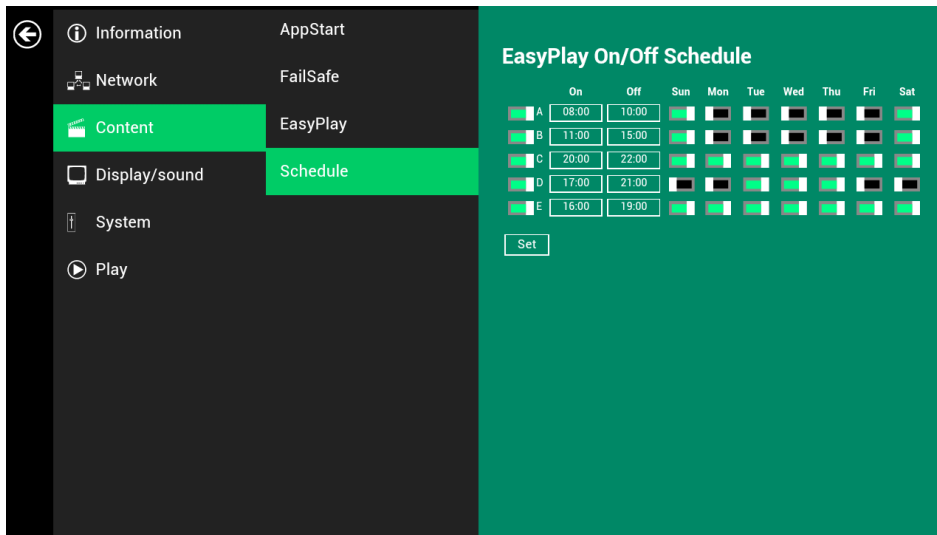

(Fig. 2.9.5)

The exact playback time will be the time slots marked in Blue as shown in figure 2.9.6. The dark blue parts are the overlap time of C/D and D/E.

(Fig. 2.9.6)

11
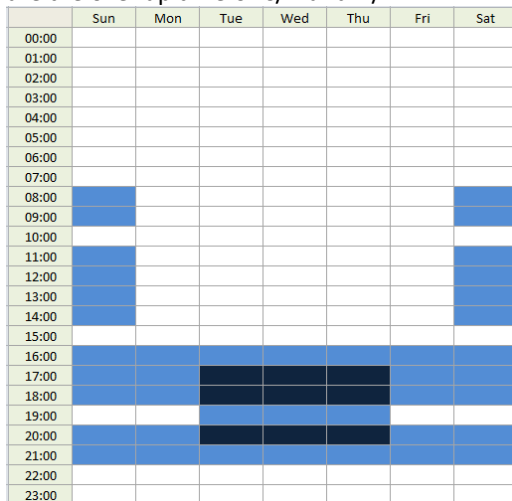

2.10. Display settings

Output Mode

The default output mode is set to 'Panel' with resolution 1280 x 800. (Fig. 2.10.3)

If you are connecting to a monitor via the HDMI port, refer to the device specification for the best matching setting.

Please note that the signboard supports only one output device at a time.

1   Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

2   Click the **Display/sound** button, and then click on **Display**. The Display Settings page will be launched.
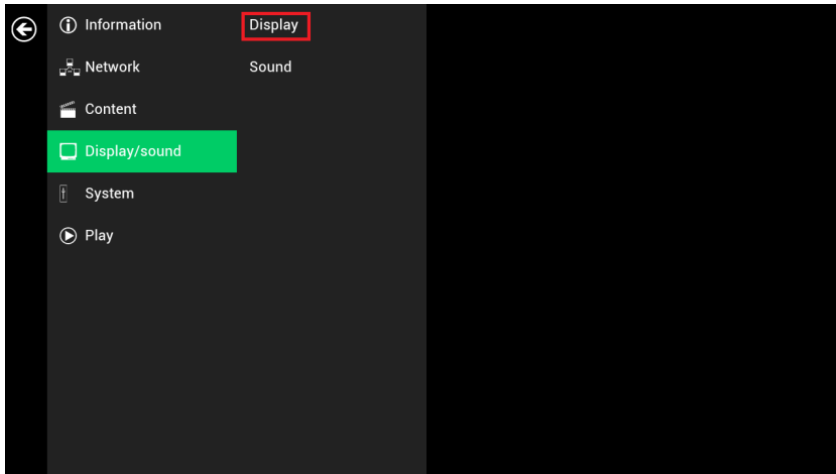

(Fig. 2.10.1)

3   Click on **Output mode**. Select Output mode from the popup menu.
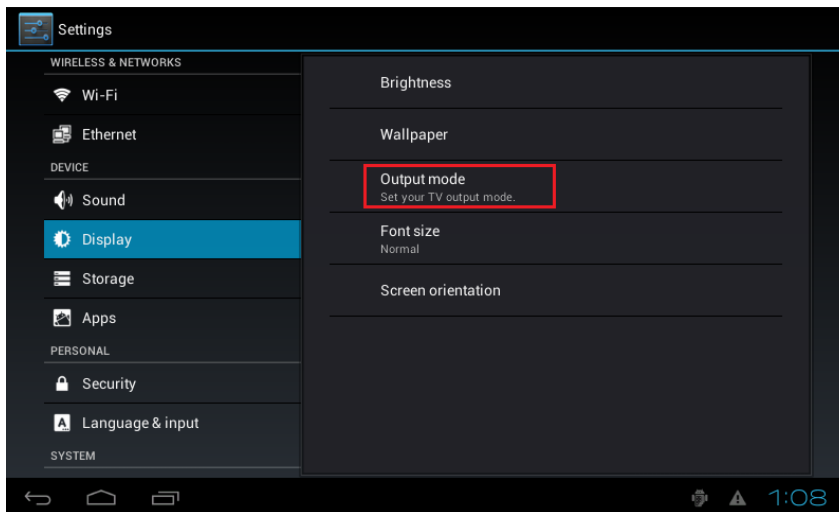

(Fig. 2.10.2)

(Fig. 2.10.3)

Panel Brightness

The default panel brightness is set to maximum, and it can be adjusted in the Display settings.

1 Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

2 Click the **Display/sound** button, and then click on **Display**. The Display Settings page will be launched. (Fig. 2.10.1)

3 Click on **Brightness**.
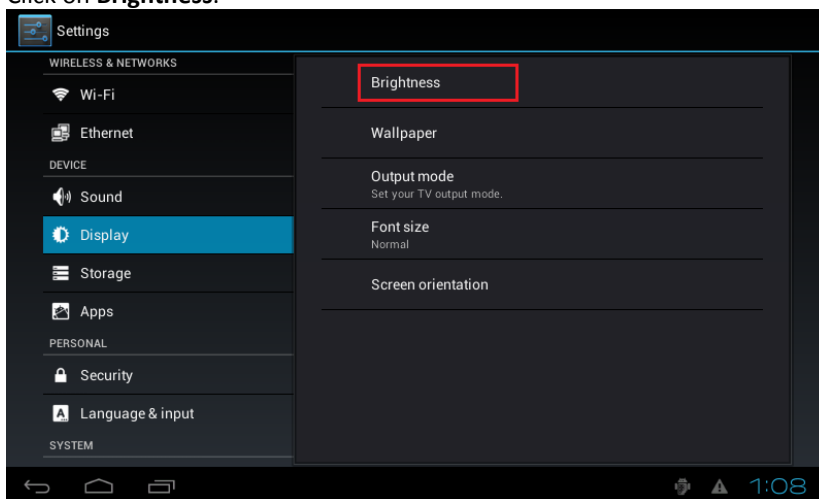

(Fig. 2.10.4)

4 Drag the blue dot marked in red below to adjust the brightness. Click on OK to save the configuration.

(Fig. 2.10.5)

13
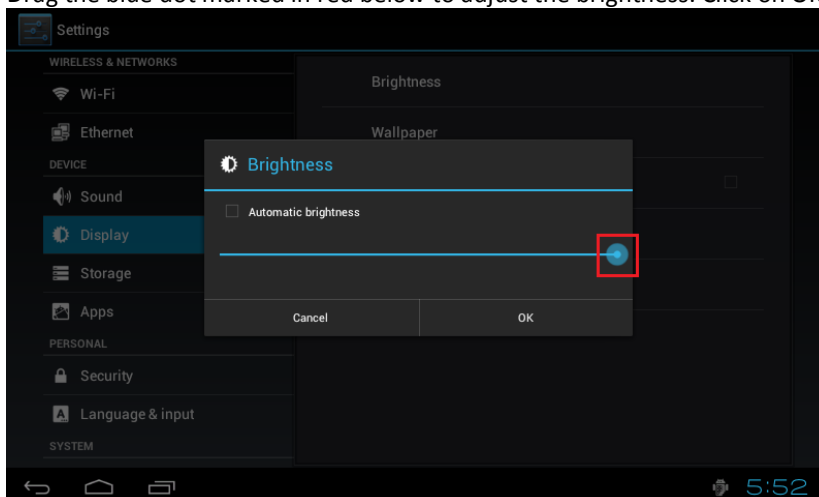

Screen orientation

Screen orientation is to set the display to rotate 90/180/270 degrees.

1   Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

2   Click the **Display/sound** button, and then click on **Display**. The Display Settings page will be launched. (Fig. 2.10.1)

3   Click on the **Screen orientation** marked in red below.
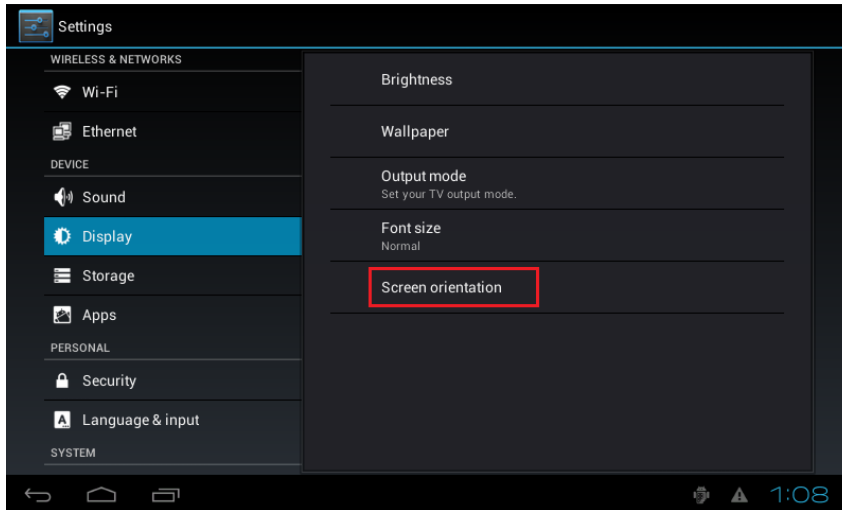

(Fig. 2.10.6)

4   Click on the preferred angle from the menu. The option "Auto-rotate" allows the display to rotate along with the signboard automatically.
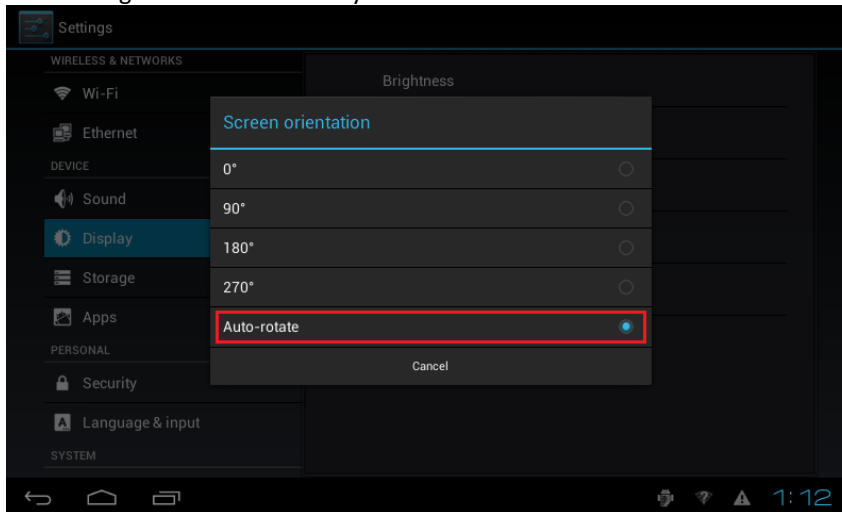

(Fig. 2.10.7)

2.11.   Sound settings

To control the output sound volumes and touch sounds.

1   Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

**2**   Click the **Display/sound** button, and then click on **Sound**. The Sound Settings page will be launched.

14
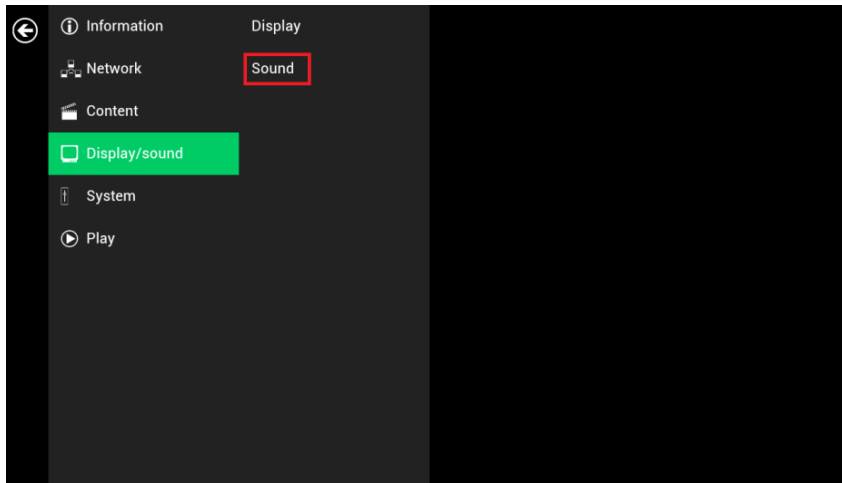

(Fig. 2.11.1)

3 Click on **Volumes**, the Volumes settings page will be launched. Drag the blue dots to adjust the volumes for the selected item, and then click on OK to save the new settings. (Fig. 2.11.3)

4 Click on the checkbox on the right as marked in red to enable/disable the Touch sounds. (Fig. 2.11.2)
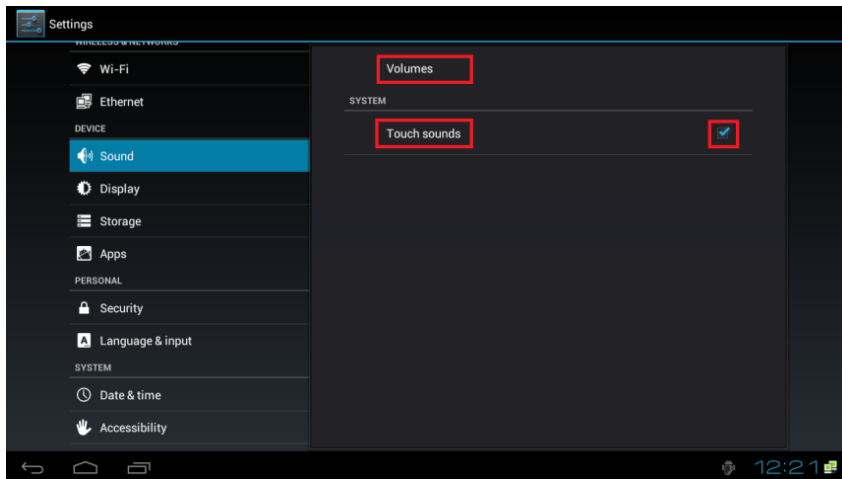

(Fig. 2.11.2)
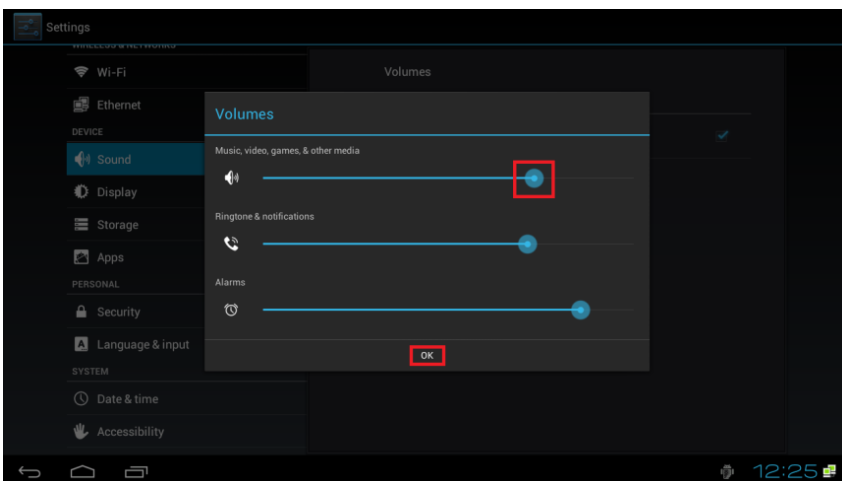

(Fig. 2.11.3)

2.12. System configuration – Time Server

The feature allows user to choose the player's time synchronization source. When it's enabled, the player synchronizes with the time of AppStart URL. Otherwise, the player synchronizes with Android default time server.

1 Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

15

2   Click on **System**, and click on **Time Server**.

3   Click the **Use AppStart URL as time server** button as marked in red below to enable/disable the time server function.

4   Click on **Set** to save the setting.
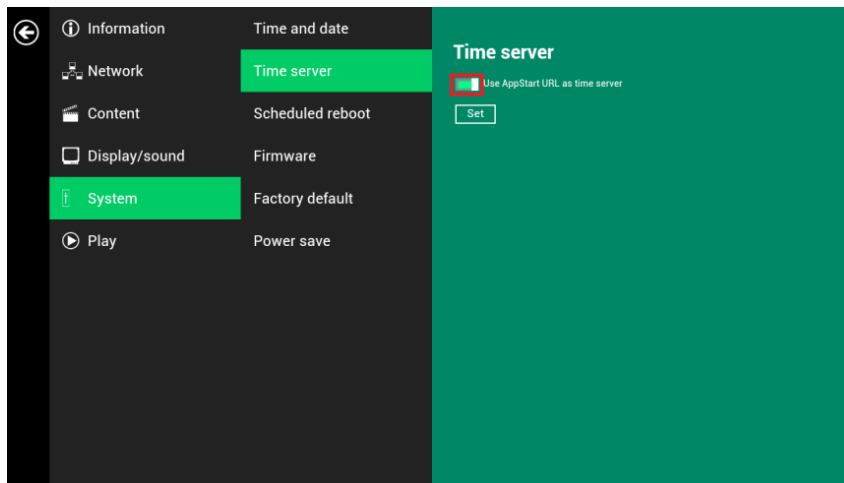

(Fig. 2.12.1)

2.12.2.13.   System configuration – Scheduled reboot

The feature Scheduled Reboot allows the signboard to reboot on the assigned time automatically every day.

~~1~~5   Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

~~2~~6   Click on **System**, and click on **Scheduled Reboot**.

~~3~~7   Click the **Enable daily reboot** button as marked in red below to enable/disable the daily reboot function. Click on the dialogue box to set the time. The value can be input by using the pop-up keyboard or the USB keyboard.

~~4~~8   Click on **Set** to save the setting.
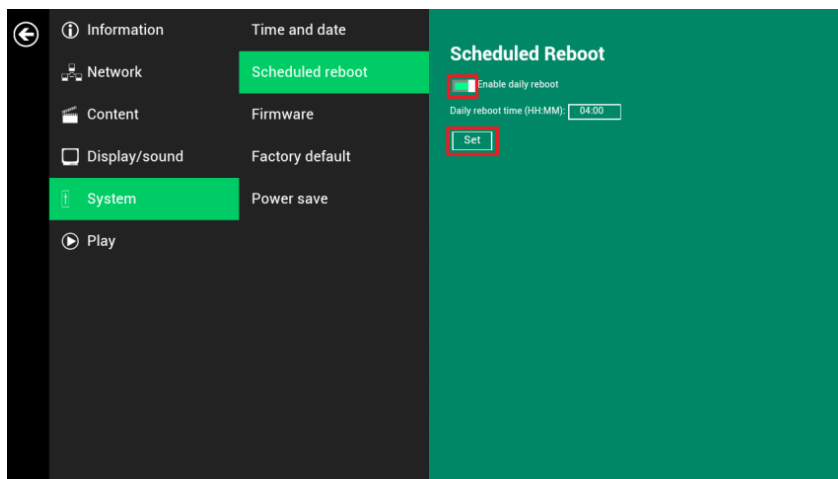

(Fig. 2.13.1)

2.13.2.14.   System configuration - Firmware upgrades

Firmware updates can be performed by using a USB flash drive. Please read the release notes carefully regarding the changes that will be made to your signboard before applying the upgrade.

IMPORTANT: DO NOT unplug the USB drive or power down the signboard while the system is performing the firmware update.

16

1 Download the latest firmware and copy it to the root directory of a USB drive from http://support.IAdea.com

2 Plug in the power cord into the device.

3 Plug in a USB mouse to the device to enter Basic settings menu.

4 Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

5 Click on **System**, and choose **Firmware**.

6 Click on **OK** for proceeding to the firmware update process.
(Fig. 2.14.1)

7 Plug in the USB drive while the screen shows "Scanning USB drives for firmware package".
(Fig. 2.14.2)

2.14.2.15.　　System configuration - Factory reset

If you forget a system password you have set, you must reset the system to regain access to the signboard.

Using the reset button

1 **PRESS** and **HOLD** the reset button with a pen.

2 **RE-CONNECT** the power cord.

3 **WAIT** about 16 seconds or until the status LED flashes.

4 **RELEASE** reset button and wait for system to initialize.
Reset button

Using a USB mouse

System reset will re-initialize the system, clear passwords, and return settings to their default values. Perform the following:

1 **CONNECT** a USB mouse.

2 Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

3 Click on **System** configuration, and choose **Factory default.**

4 Click on **OK** button to do the reset.
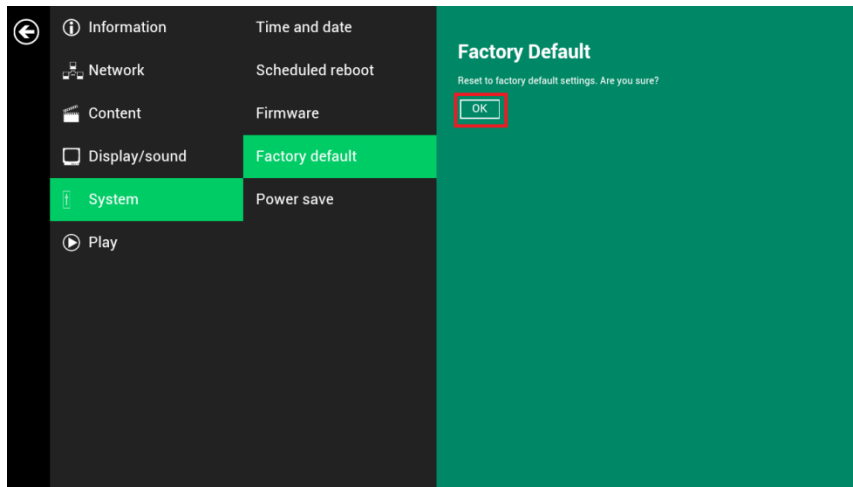

(Fig. 2.15.1)

~~2.15.~~2.16.   System configuration – Power save

The feature Power save allows the signboard to power off automatically while stopping at the Basic settings page without any action is been taken for 10 minutes.

1 Click the **Advanced** button, advanced configuration menu will be launched. (Fig. 2.6.1)

2 Click on **System**, and click on **Power save**.
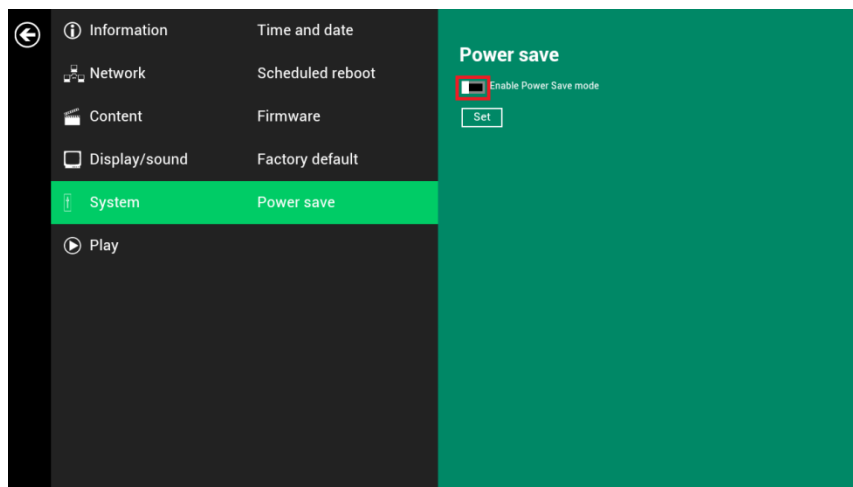

(Fig. 2.16.1)

~~2.16.~~2.17.   System configuration – Expand Storage by using SD card

IAdea player allows user to use external SD card to replace the built-in SD card for user who need larger storage space.

18

1. Take an IAdea-approved SD card, **format** it as FAT16/32 clean
2. In the root directory of the card, **create** a file named "EXPANSIONCARD" (case insensitive, Fig.2.17.1)
3. **Insert** SD card into player, lock it with provided SD card lock clip, then do a power cycle
4. Device now has expanded storage
(Fig. 2.17.1)

3. Content Management

The XDS-1068 is designed to work with 3rd party management solutions. Please refer to the printed guide for related set up instructions.

4. Authoring in HTML5

A major advancement in the XDS-1068 digital signboard is the ability to playback HTML5 content which can contain dynamic information.

To find out more about using HTML5 for digital signage, visit http://widget.iadea.com.

5. Working with SMIL

The XDS-1068 uses open communications protocols for content presentation and playback control. SMIL-compliance means predictable results across multiple devices, and SMIL's non-proprietary nature means that your investments are never obsolete.

5.1. Introduction

Using SMIL (pronounced "smile"), the language created by W3C for multimedia communications, the signboard understands the language "spoken" by professional tools from companies such as Adobe, Apple, Microsoft, and Real Networks. What this means is quicker, easier, and better integration of your signboard into your digital signage networks, opening up avenues of software controls and realizing the full potential of your signboard hardware down the road.

5.2. www.a-smil.org for developers

The signboard operating system utilizes W3C SMIL as the underlying scripting language, which lends well to customization to your project management needs. For resources, downloads, and community support, please visit www.a-smil.org.

6. Technical Data

6.1. Specifications

	XDS-1068
Video format support	POPAI Screen Media Standards
	S6 (MPEG-1 SIF, 3Mbps CBR)
	S7 (MPEG-1 480p, 10Mbps CBR)
	S8 (MPEG-1 720p, 15Mbps CBR)
	S9 (MPEG-2 480p, 6Mbps CBR)
	S10 (MPEG-2 720p, 12Mbps CBR)
	S11 (MPEG-4 AVC, 480p, 6Mbps CBR)
	S12 (MPEG-4 AVC, 720p, 10Mbps CBR)
	E4 (VC-1/WMV9, MP@ML, 720p)
	E7 (MPEG-4 ASP, 480p, 10Mbps CBR)
	E8 (MPEG-4 AVC, 1080p, 10Mbps CBR)
Image format support	POPAI Screen Media Standards
	S1 (JPEG 480p baseline)
	S2 (JPEG 720p baseline)
	S3 (JPEG 1080p baseline)
	E1 (PNG 24bpp+alpha, 480p)
	E2 (PNG 24bpp+alpha, 720p)
	E3 (PNG 24bpp+alpha, 1080p)
Audio codec support	POPAI Screen Media Standards
	S4 (MPEG L2 audio)
	S5 (MP3 audio, 320Kbps)
Dynamic content	W3C HTML5 (HTML, CSS, JavaScript)
	W3C SMIL 3.0 instructions (sub-set)
Physical I/O connectors	HDMI 1.3a
	Wi-Fi antenna port
	RJ45 Ethernet
	USB 2.0
	3.5mm stereo audio out jack
Local storage	4GB on-board flash memory (up to 1.8 hrs of 5 Mbps high def.

	video)
	SD card expansion slot
Accessories	3.5mm-RCA AV cable
	Ethernet cable
Power requirement	12V 1.5A DC
Power consumption*	14.15 watts max
Environmental	Operating temperature: 0 – 40° C / 32 – 104° F
	Humidity: 5 – 85% @ 40° C / 32 – 104° F non-condensing
Dimensions	278 x 186 x 40 mm (10.94 x 7.28 x 1.57 inches)
Weight	0.78kg
	1.72lbs
Safety	UL-approved AC adapters
Certifications	CE/LVD/FCC
Warranty	One-year limited parts & labor

7. Appendix: FAQ

What video format can I play?
Video files encoded in MPEG-4 AVC up to 1920x1080 resolutions and 10Mbps bitrates should play perfectly. If a certain video is not played as scheduled, or if it plays poorly, please search the support site for "transcode" instructions.

The signboard is placed near my Wi-Fi access point, yet the connection is unreliable.
Wi-Fi appliances in general should be placed 10 feet (3 meters) from the Wi-Fi access point for reliable operation. Try relocating the access point further away from the signboards to improve connection.

What can I do about the gap between video and video?
Video gaps (blank screen) occur before and after each video are played. To minimize the gap, avoid back to back video programming by scheduling an image between each video.

If both Ethernet & WiFi are connected, which one will take precedence?
If both connections are available, WiFi will be used.

What is the maximum file size for a single video file?
The maximum video file size for the XDS-1068 is 2GB. We recommend reserving a safety margin to avoid exceeding the limit (i.e. limiting files to 1850MB).

What should I do if I forgot my password?
In this case, please perform a factory reset.

Use the S/W RESET button located at the back of the signboard to restore factory settings. This will also clear the signboard's password.

How do I manage the playback of contents?
The media appliance is designed to be interoperable with leading 3rd party management software solutions or via SMIL open standard commands.

Could the signboard display Flash or Microsoft PowerPoint presentations?
The signboard features limited PowerPoint support, but not Flash support.

While PCs can play many formats with varying degrees of success, RISC-based signboard are designed to reliably play specific video formats (Please see spec for details). While Microsoft PowerPoint native files could not play directly on a RISC-based signboard, the file is converted through other software (i.e. Adfotain Manager Express)

21

into an image format to be played as an image slideshow.

Why won't some media files play properly?
The video data bit-rate used may have exceeded the recommended bit rate.

The video data bit-rate is the amount of video or audio data used per second to store or play the contents, usually expressed in Mbps (mega-bits per second). Video encoded with excessive bit-rates will not playback smoothly in the media signboard, likely due to storage i/o bottleneck.

Visit http://support.iadea.com for compatible media format presets.

Some JPEG images cannot be played in the signboard.
Progressive JPEG are not supported. Please convert to baseline JPEG for maximum compatibility.

JPEG images can be either of 2 types: baseline or progressive compression. Baseline JPEG offers greatest compatibility, while progressive JPEGs are suitable for web site images. Progressive images are downloaded and displayed "progressively," being rendered more clearly as more data is received over the internet. Progressive images are primarily supported on PCs. For media appliances, make sure to save images as baseline JPEG in your photo editor, or resave them as baseline JPEGs using free tools such as IrfanView (http://www.irfanview.com/).

The signboard is not playing. What should I do?
Play list errors and scheduling issues are two major causes of playback problems. To determine if the problem is caused by a bad play list, just delete the play list and restart signboard. The signboard should loop through all media files, indicating a fault with the play list.

If the playback is scheduled to play at specific time, check to see if the device is set to the right time zone on the world clock. When nothing seems wrong, the time zone setting is often the reason the program is not played.

IAdea Limited Warranty

For Media Player Devices

Applicable to IAdea product models:

- XDS-1068

1. IAdea provides, unless extended through optional service programs, one (1) year of limited warranty on its applicable product models listed above. The applicable product must be purchased through an authorized IAdea reseller. Subject to the conditions of this warranty, IAdea will perform necessary service on the product without charge for parts or labor if, in the opinion of IAdea, the product is found to be faulty within the warranty period. IAdea's sole warranty and obligation will be to repair or replace (at it sole discretion) such products that require warranty during the applicable warranty period in accordance with these conditions. If the product is found to be in correct working order, then IAdea reserves the right to charge you for its time and materials costs.
2. This warranty only applies if the product has been under normal use and reasonable care (in the opinion of IAdea). The warranty covers normal usage for which the unit was originally supplied and does not cover damage, malfunction or failure resulting from use of incorrect voltages, unauthorized installation, accident, misuse, neglect, build-up of dirt or dust, abuse, power surge problems, thunderstorm activity, tampering or repair by unauthorized persons (including unauthorized alterations), unauthorized maintenance, exposure to abnormally corrosive conditions or any foreign object or matter having entered the product.
3. If warranty service is required you should contact IAdea at support@IAdea.com. You will be required to fill out an RMA form and provide proof for your original date of purchase.
4. You will be responsible for shipping the product to designated IAdea service locations. You are required to pre-pay for the shipping and custom charges, if any, required for the shipment of the product to IAdea. The warranties hereby conferred do not extend to any costs associated with the delivery, handling, freighting or transportation of the product and do not extend to any damage or loss occurring during, or associated with, transit.

IAdea currently provides warranty service locations in Taipei, Taiwan and Newark, California, USA.

For questions or further information, please contact support@IAdea.com.
